

WHAT CLAIMED IS:

5

1. A signal processing apparatus comprising:  
a digital signal processor comprising an  
internal memory part storing a program to be  
executed;

10

an external memory part storing programs  
executable in said digital signal processor;  
a clock signal generating part generating a  
clock signal and outputting the clock signal to said  
digital signal processor; and

15

a clock signal control part controlling  
outputting of said clock signal to said digital  
signal processor so that said programs stored in said  
external memory part can be forwarded to said  
internal memory part.

20

2. The signal processing apparatus as  
25 claimed in claim 1, wherein said clock signal control

00000000-00000000

part forwards said programs read from said external memory part to said internal memory after stopping outputting said clock signal to said digital signal processor.

5

3. The signal processing apparatus as  
10 claimed in claim 1, wherein said clock signal control part comprises a forward circuit part and a clock control part, said clock control part stops outputting said clock signal to said digital signal processor after said forward circuit part supplies  
15 said clock control part with a signal requesting that said clock control part stops outputting said clock signal to said digital signal processor so that said programs stored in said external memory part can be forwarded to said internal memory part.

20

4. The signal processing apparatus as  
25 claimed in claim 3, wherein said clock control part

095555-01001

restarts outputting said clock signal to said digital  
signal processor after said forward circuit part  
supplies said clock control part with a signal  
requesting that said clock control part outputs said  
5 clock signal to said digital signal processor when  
said programs stored in said external memory part are  
completely forwarded to said internal memory part.

10

5. The signal processing apparatus as  
claimed in claim 1, wherein said clock signal control  
part controls outputting of said clock signal to said  
15 digital signal processor in compliance with a request  
from said digital signal processor.

20

6. The signal processing apparatus as  
claimed in claim 1, wherein said clock signal control  
part controls outputting of said clock signal to said  
digital signal processor in compliance with a request  
25 from an outside of said signal processing apparatus.

09553835-001001

7. The signal processing apparatus as claimed in claim 1, wherein said clock signal control part comprises a forward circuit for forwarding a desired part of said programs read from said external  
5 memory part to said internal memory.

10           8. A modem for modulating/demodulating a  
communication data by using a signal processing  
apparatus comprising:

a digital signal processor comprising an  
internal memory part storing a program to be  
15 executed;

an external memory part storing programs executable in said digital signal processor;

a clock signal generating part for  
generating a clock signal and outputting the clock  
20 signal to said digital signal processor to said  
digital signal processor; and

a clock signal control part controlling  
outputting of said clock signal to said digital  
signal processor so that said programs stored in said  
25 external memory part can be forwarded to said

internal memory part.

5

9. The modem as claimed in 8, wherein said clock signal control part forwards said programs read from said external memory part to said internal memory after stopping outputting said clock signal to  
10 said digital signal processor.

15 10. The modem as claimed in 8, wherein said clock signal control part comprises a forward circuit part and a clock control part, said clock control part stops outputting said clock signal to said digital signal processor after said forward circuit  
20 part supplies said clock control part with a signal requesting that said clock control part stops outputting said clock signal to said digital signal processor so that said programs stored in said external memory part can be forwarded to said  
25 internal memory part.

0055885-01901

10

20

13. The modem as claimed in 8, wherein said  
clock signal control part controls outputting of said  
25 clock signal to said digital signal processor in

compliance with a request from an outside of said  
signal processing apparatus.

5

14. The modem as claimed in 8, wherein said  
clock signal control part comprises a forward circuit  
for forwarding a desired part of said programs read  
10 from said external memory part to said internal  
memory.

2025 RELEASE UNDER E.O. 14176
